说明

SN65HVD1040 满足或者超过 ISO 11898 标准中规定的对于采用控制器局域网络 (CAN) 的应用所要求的技术规范。作为 CAN 收发器, 这些器件能够为信号传输速率高达每秒钟 1 兆比特 (Mbps) 的 CAN 控制器提供差分传输和接收能力。 ⁽²⁾

被设计运行在恶劣环境下, 此器件在总线和拆分引脚上特有 **±12 kV ESD** 保护, 以及交叉线, 过压保护和 **-27 V** 至 **40 V** 的失地保护, 一个 **-12 V** 至 **12 V** 的共模范围, 并且根据 ISO 7637 标准能承受从 **-200 V** 到 **200 V** 的电压瞬变。

STB 输入 (引脚8) 用于在两个不同的运行模式间做出选择; 即高速模式或者低速模式。通过将 STB 引脚接地来选择高速运行模式。

如果一个高逻辑电平被加在 SN65HVD1040 的 STB 引脚上, 此器件进入一个低功率总线监控待机模式。当 SN65HVD1040 运行在低功率总线监控待机模式下的时候, 总线上一个大于 **5 μ s** 的显性位由总线监控电路传递到接收器输出。然后, 当此器件需要向总线传输数据时, 此本地协议控制器可以重新激活此器件。

SN65HVD1040 内的主计时电路在硬件或者软件故障期间防止此驱动器阻塞网络通信。此计时电路由 TXD (引脚1) 上的下降沿触发。如果在此电路的计时常数过期前没有发现上升沿, 此驱动器将被禁用。此电路被 TXD 上的下一个上升沿复位。

(2) 一条线路的信号传输速率就是电压瞬变的次数, 即每秒钟单位 bps (每秒比特数)。

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

SN65HVD1040 上可具有拆分 (SPLIT) 输出 (引脚 5)，在拆分式终端网络中，此输出可作为一个 $V_{CC}/2$ 共模总线偏置电压。

SN65HVD1040 额定工作温度 -55°C 至 210°C 。

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

APPLICATION INFORMATION

CAN Basics

The basics of arbitration require that the receiver at the sending node designate the first bit as dominant or recessive after the initial wave of the first bit of a message travels to the most remote node on a network and back again. Typically, this “sample” is made at 75% of the bit width, and within this limitation, the maximum allowable signal distortion in a CAN network is determined by network electrical parameters.

Factors to be considered in network design include the approximately 5 ns/m propagation delay of typical twisted-pair bus cable; signal amplitude loss due to the loss mechanisms of the cable; and the number, length, and spacing of drop-lines (stubs) on a network. Under strict analysis, variations among the different oscillators in a system also need to be accounted for with adjustments in signaling rate and stub and bus length. [Table 7](#) lists the maximum signaling rates achieved with the SN65HVD1040 with several bus lengths of category 5, shielded twisted pair (CAT 5 STP) cable.

Table 7. Maximum Signaling Rates for Various Cable Lengths

Bus Length (m)	Signaling Rate (kbps)
30	1000
100	500
250	250
500	125
1000	62.5

The ISO 11898 Standard specifies a maximum bus length of 40 m and maximum stub length of 0.3 m with a maximum of 30 nodes. However, with careful design, users can have longer cables, longer stub lengths, and many more nodes to a bus. (Note: Non-standard application may come with a trade-off in signaling rate.) A large number of nodes requires a transceiver with high input impedance such as the HVD1040.

The Standard specifies the interconnect to be a single twisted-pair cable (shielded or unshielded) with 120 Ω characteristic impedance (Z_0). Resistors equal to the characteristic impedance of the line terminate both ends of the cable to prevent signal reflections. Unterminated drop-lines connect nodes to the bus and should be kept as short as possible to minimize signal reflections.

Connectors, while not specified by the standard should have as little effect as possible on standard operating parameters such as capacitive loading. Although unshielded cable is used in many applications, data transmission circuits employing CAN transceivers are usually used in applications requiring a rugged interconnection with a wide common-mode voltage range. Therefore, shielded cable is recommended in these electronically harsh environments, and when coupled with the Standard's -2 -V to 7-V common-mode range of tolerable ground noise, helps to ensure data integrity. The HVD1040 enhances the Standard's insurance of data integrity with an extended -12 V to 12 V range of common-mode operation.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
